Munchinhally Estate,
Yelahunka,
S. M. Railway,
July, 1914.

To

The Dewan of Mysore.

The application of Frederick Archilians Charles Devereux. — Land owner of Munchinhally Estate, (Yelahunka) Yelahunka Hobblee, Bangalore District, for leave to file a specification under Part I of the Inventions and Designs Act. 1888.

The applicant is in possession of an Invention for an Improved Pullage Plough Attachment; he is the Inventor thereof and, to the best of his information and belief, the Invention is new within the meaning of Part I of the Inventions and Designs Act, 1888, and no circumstance exists which if the applicant is authorized to file his specification and files it in accordance with that part, will disentile him to an

exclusive privilege thereunder in respect of the Invention. No application has been made in the United Kingdom.

The following is a description of the Invention:— The Invention is to decrease the Pullage and make it easier for the Bullocks in India to pull a present Modern English Plough, whether it is the indentical English Plough or the said Plough adapted with a short Pole for India.

The Invention consists of, and is as follows:— A rope or light chain (either may be used), as per chain line A.B.C. is attached to the ring A. generally placed at the end of the Pole of the Plough, (the part nearest the bullocks); the said rope or chain is then passed through a Pulley B. or Block, the said Pulley, or Block being attached to the middle of the Yoke that is placed on the Bulls necks, by a swivel Hook and Ring. The Rope after passing through the said Pulley is made fast to the end of the Pole C. of the Plough, nearest to the man working and guiding the Plough, or to the end of the Pole where it is attached to the framework of the Plough share.

Having now particularly described and ascertained the nature of my said Invention and in what manner it is to be performed I declare that what I claim is:-

(1) By this simple process, the Pullage and Draftage of the Plough by the Bullocks is decreased for the reason that by this process the Plough can be drawn up and placed close to the Bulls; whereas previously a long chain and Driftage had to be adopted to enable the Plough share to penetrate and work the ground properly.

(2) By this means the man guiding the Plough, and driving the Bulls is brought in close contact with his Bullocks, and has absolute command over his animals. This was previously the case with the Indian Ryot Plough, but never up to now with the English Plough adapted for Indian uses.

(3) It is now possible for the poorest Ryot with very inferior and small animals to use the present English Plough (Kolar Mission etc. adapted for India) whereas formerly only Ryots who could afford bullocks worth from Rs 200 to Rs 500. could use the above mentioned Ploughs.

P.T.O.

Therefore this Invention is of material, financial and practical benefit to the whole of the Indian Ryots.

27th July, 1914. Fred Dewey

I, the applicant above named, do declare that the facts stated in this application are true to my knowledge, except as to the matters stated on information and belief, and as to those matters I believe them to be true.

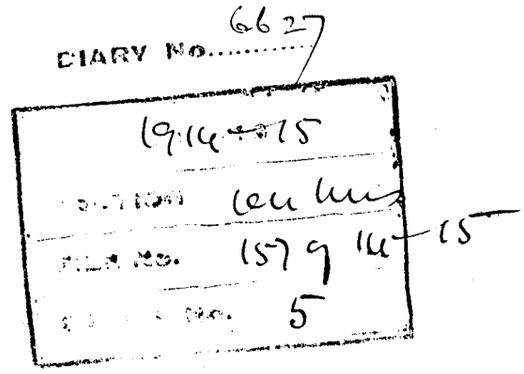
4th February 1915.



The Secretary,

To the Dewan of Mysore,

B a n g a l o r e.

Dear Sir,

I beg to bring to your kind notice, that I have received no intimation whatsoever re my application for an Improved Plough Attachment, with Specifications and Drawings attached.

At the same time that I applied to the Mysore Government, I also applied to the All India Government for Patent, and I herewith enclose a copy of a Memorandum received from the latter Government, for your perusal.

Trusting that my application etc., will meet with your kind consideration, at your earliest convenience, I have only to add that the ploughing season is not far distant and that already there are great demands for the above mentioned Attachment.

I remain,

Dear Sir,

Yours faithfully,

Fred Dervent

THE PATENT OFFICE.

Notice of Acceptance of Application.

Patent Application No 1805.

Under Section 6 of the Indian Patents and Designs Act (II of 1911) notice is hereby given that the application for a patent made by F.A.C. Devereux, of Munchinhully Estate, (Yelahunka), Yelahunka Hooblee, Bangalore District.

and numbered as above has been accepted. The application, specification, and drawings (if any) are open to public inspection. The acceptance will be advertised in the Gazette of India next issued after the date at the foot hereof and the printed specification and drawings (if any) will be available in about three weeks time at a price of eight annas each copy. Within three months of the date of that advertisement any person may, under Section 9 of the Act, give notice of opposition to the grant of the patent. If there is no opposition, or in case of opposition, if the determination is in favour of the grant of a patent, due notice will be given to the applicant that if he desires a patent to be sealed, he should file his request on Form 7.

Dated this 4th day of January 1915.

No. 6

FROM

LESLIE C. COLEMAN, ESQ., M.A., PH.D.,
DIRECTOR OF AGRICULTURE IN MYSORE,
BANGALORE.

To

D. M. Narasinga Rao, Esquire, B.A., B.L.,
Secretary to the Govt. of H. H. the Maharaja
of Mysore, Genl. & Rev. Depts., B a n g a l o r e.

SIR,

I have the honour to acknowledge receipt of your letter No.G2126/G.M.157-14-3 dated 28th August 1914, with the enclosure and to state that the delay in reporting thereon has been due to the difficulty in testing Mr. Devereux's attachment owing to lack of rain for ploughing. Even now the attachment has not been as thoroughly tested as I should wish. However tests have been carried out both by the Farm Manager, Hebbal and myself which justify certain conclusions.

Firstly Mr. Devereux's contention with regard to the lessening of draught by the use of his attachment has not been substantiated. There appears to be ~~better~~ little difference between the draught of the plough when his attachment is used and when it is not and what little difference there is appears to be unfavourable to his attachment.

There are certain other disadvantages in connection with the attachment which prevent me from recommending it. However it has the advantage of allowing the plough being attach~~ment~~ed much

closer to the bullocks than it can be now and this will undoubtedly appeal to the ryots. Under the circumstances although I cannot personally recommend the attachment it may help in popularising the plough and I think the patent may be granted.

The application for patent is herewith returned.

I have the honour to be,

Sir,

Your most obedient servant,

Leslie Coleman

Director of Agriculture.

Munchinhally Estate,
Yelahunka.
S. M. Railway,
July. 1914.

To

The Dewan of Mysore.

The application of Frederick Archilians Charles Revereux.— Land owner of Munchinhally Estate, (Yelahunka) Yelahunka Hoblee, Bangalore District for lease to file a specification under Part I of the Inventions and Designs Act. 1888.

The applicant is in possession of an Invention for an Improved Tillage Plough Attachment; he is the Inventor thereof and to the best of his information and belief, the Invention is new within the meaning of Part I of the Inventions and Designs Act, 1888, and no circumstance exists which if the applicant is authorized to file his specification and files it in accordance with that part, will disentile him to an exclusive privilege thereunder in respect

of the Invention. No application has been made in the United Kingdom.

The following is a description of the Invention:— The Invention is to decrease the Pullage and make it easier for the Bullocks in India to pull a present Modern English Plough, whether it is the indentical English Plough or the said Plough adapted with a short Pole for India.

The Invention consists of, and is as follows:— A rope or light chain (either may be used), as per chain line A.B.E. is attached to the ring A. generally placed at the end of the Plough, (the part nearest the bullocks); the said rope or chain is then passed through a Pulley B. or Block the said Pulley or Block being attached to the middle of the Yoke that is placed on the bulls necks by a swivel hook and ring. The rope after passing through the said Pulley is made fast to the end of the Pole C. of the Plough, nearest to the man working and guiding the Plough or to the end of the Pole where it is attached to the framework of the Plough share.

Having now particularly described and ascertained the nature of my said Invention and in what manner it is to be performed I declare that what I claim is:-

(1) By this simple process, the Pullage and Draftage of the Plough by the Bullocks is decreased for the reason that by this process the Plough can be drawn up and placed close to the Bulls; whereas previously and long chain and Draftage had to be adopted to enable the Plough share to penetrate and work the ground properly.

(2) By this means the man guiding the Plough and driving the Bulls is brought in close contact with his bullocks and has absolute command over his animals. This was previously the case with the Indian Ryot Plough, but never up to now with the English Plough adapted for Indian uses.

(3) It is now possible for the poorest Ryot with very inferior and small animals to use the present English Plough (Kolar Mission etc. adapted for India) whereas formerly only Ryots who could afford Bullocks worth from Rs 200 to Rs 500. could use the above mentioned Ploughs.

Therefore this Invention is of material, financial and practical benefit to the whole of the Indian Ryots.

27th July, 1914. Fred Deverell

I, the applicant abovenamed, do declare that the facts stated in this application are true to my knowledge, except as to the matters stated on information and belief, and as to those matters I believe them to be true.
